Education

University of Cebu (Main) *2023 – Expected 2027*
B.S. Computer Science
Consistent Dean's Lister, First Year through Third Year College

Project Experience

Anthea | *Next.js, TypeScript, Tailwind CSS, Google Gemini API, Vercel*
Full-Stack Developer, Project Manager, Team Project | *Cebu City, Philippines* | *October 2026*

- Built a hands-free voice assistant that identifies plants, diagnoses symptoms, and calculates watering schedules using Gemini function calling and the Perenual API, with spoken replies and automatic send after the user stops talking.
- Developed serverless API routes on Vercel with request validation, Upstash Redis rate limiting, timeouts, automatic retries, and a fallback AI model, plus Gemini and Whisper speech-to-text fallbacks for reliable voice input.

Lifevent | *Next.js, TypeScript, Tailwind CSS, Framer Motion, Recharts, NextAuth*
Front-End Developer, Team Project | *Cebu City, Philippines* | *September 2026*

- Architected a theme-aware (Light/Dark) Bento-style dashboard with Recharts analytics visualizations, interactive date-range filtering, and localized multi-language support.
- Engineered a branded authentication portal featuring NextAuth credential management, rate-limiting cooldown controls against brute-force attempts, and dynamic HTML5 particle canvas background animations.

FuelWatch PH | *Go, Python, FastAPI, Next.js, TypeScript, Tailwind CSS, SQLite*
Independent Full-Stack Developer | *Cebu City, Philippines* | *June 2026 - Present*

- Built a full-stack fuel price tracking app using a concurrent Go scraper with an automated Tuesday scheduler to collect Philippine fuel prices weekly from 5 major oil companies across 6 fuel types.
- Designed a REST API using FastAPI and SQLite to store and serve real-time price data, with an ARIMA-based prediction model that forecasts next-week fuel prices with confidence intervals.
- Developed a dark-mode dashboard using Next.js and Tailwind CSS featuring interactive price history charts and live prediction confidence badges per brand and fuel type.

Seek First Books — Client Landing Page | *Astro, Tailwind CSS v4, TypeScript, Vercel*
Independent Front-End Developer | *Cebu City, Philippines* | *May 2026*

- Built a high-performance, fully responsive bookkeeping landing page using Astro and Tailwind CSS v4, managing end-to-end continuous deployment via Vercel.
- Designed modular Astro component layouts including interactive pure-CSS accordions, custom navigation, and structured service showcases.

Skills & Interests

Programming Languages: JavaScript, TypeScript, Python, Go, PHP, SQL, C#, C, Java
Tools & Frameworks:

- **Frontend & UI:** Astro, React, React Native, Next.js, Tailwind CSS
- **Backend & Databases:** FastAPI, MySQL
- **DevOps & Engines:** Git, GitHub, Vercel

Interests: Data Science, Web Development, Mobile Development, Fitness
